

Energy Conservation

Why a Smart Home is a Smart Idea

Adjust your home to fit your mood at the touch of a button

NEXGEN Controls can automate your lights so they come on when you need them and go off when you don't. Indoor lighting can use sensors to automatically turn off when no one is in the room. Outdoor lighting can be programmed to come on at sunset and off before sunrise. Heating and cooling can be programmed to automatically shut off if an outside door is left open and automatically reduce heating and cooling when you are not home.

How much can you help the environment with an Energy Conservation system?

NEXGEN Controls uses dimmers, timers and occupancy sensors to reduce energy waste. With our Green Package managing a typical 3-bedroom home, over 850 pounds of CO₂ emissions could be eliminated each year. That would be like not driving your car for a month. And that's just the beginning. Imagine the positive impact you could have on the environment by adding other energy saving features...ceiling fans turn on automatically at preset temperatures to improve air circulation, window blinds close to help keep the heat out or open to let the light in.

Putting your thermostat on a schedule is great, but what if you stay home? Or come home early? With our systems at the touch of a button you can tell your house that you are home allowing your system to adjust temperature and lighting to your preset desired levels, its that easy!

Using less energy is not just good for the planet, it keeps your money in your pocket.
