

Lighting Control

IMAGINE, Pressing a single button and having all of the lights in the home dim to a preset level for your dinner party, pressing one button to shut off every light in the house when you go to bed at night, technology smart enough to turn lights off when nobody is in the room.

Elegant and convenient lighting control is finally affordable for every home. Packed with intelligent features and dramatically less expensive than competitive brands, the Control4 Wireless Switch & Dimmer marks the beginning of a new era for home automation. With its seamless wireless connectivity, the Wireless Switch & Dimmer work beautifully in any home, whether it's 100 years old or brand new.

The Wireless Outlet Switch & Dimmer connects to any plug-in device, immediately making it a part of the home automation system and allowing for quick and easy control. From the living room floor lamp to garage door opener, the Wireless Outlet Switch & Dimmer add intelligent, automated features to just about any plug-in device in the home.

NEXGEN Controls light switches, dimmers and outlet modules make it possible to control lighting from a local switch or a remote switch any where in your home — without additional wiring. These switches are wireless, so they can be recognized on the Smart Home mesh network and controlled using a touch screen, keypad, or remote control.
