

# Personal Emergency Reporting System

## Be Prepared and Keep Your Independence!

Life is unpredictable. An unexpected fall or medical emergency can happen at any time, leaving you or your loved one's cut off from help. But with the Personal Emergency Reporting System, you're never alone - prompt, professional help is available around the clock at the push of a button.

The Personal Emergency Reporting System is a supervised wireless emergency reporting product designed for the elderly or anyone with a serious medical condition. The system provides pushbutton emergency assistance.

The Console includes 2-way audio communications allowing central station monitoring personnel the ability to instantly talk with the resident of the home.

The emergency alarm can be triggered by the large EMERGENCY button on the face of the Console or with a wireless transmitter.

3 styles of wireless transmitters to choose from: Wrist, Pendant or Belt Clip.
